

# EDNA ELEMENTARY 7TH GRADE NEWS

*March 2024*

## Science

7th Grade Science is participating in Arizona State University's March Mammal Madness as part of our Ecology unit. Students are researching animal traits, habitats, behaviors, sizes, and biomes to be able to make an educated choice of which animal would win a head-to-head competition. It has been fun learning about all the different and unique animals that are part of this year's competition.

## Math

Seventh graders are learning about populations and samples. They are analyzing situations to tell if they are valid, not valid, biased, and unbiased. We will move on to Geometry when finished.

## ELA

We continue to work on parts of speech and read our novel.

## Social Studies

We have moved on to Geography and are studying parts of the world. This includes learning about the 5 themes of Geography: location, place, region, movement, and human interactions with the environment. We will also cover regions' economies, histories, and political views.
